Warning

Deep learning is new SEXY (for a reason!)

Week 3: Object Recognition

- Resnet from scratch
- Transfer Learning
- Google Colab

Week 4: Object Detection

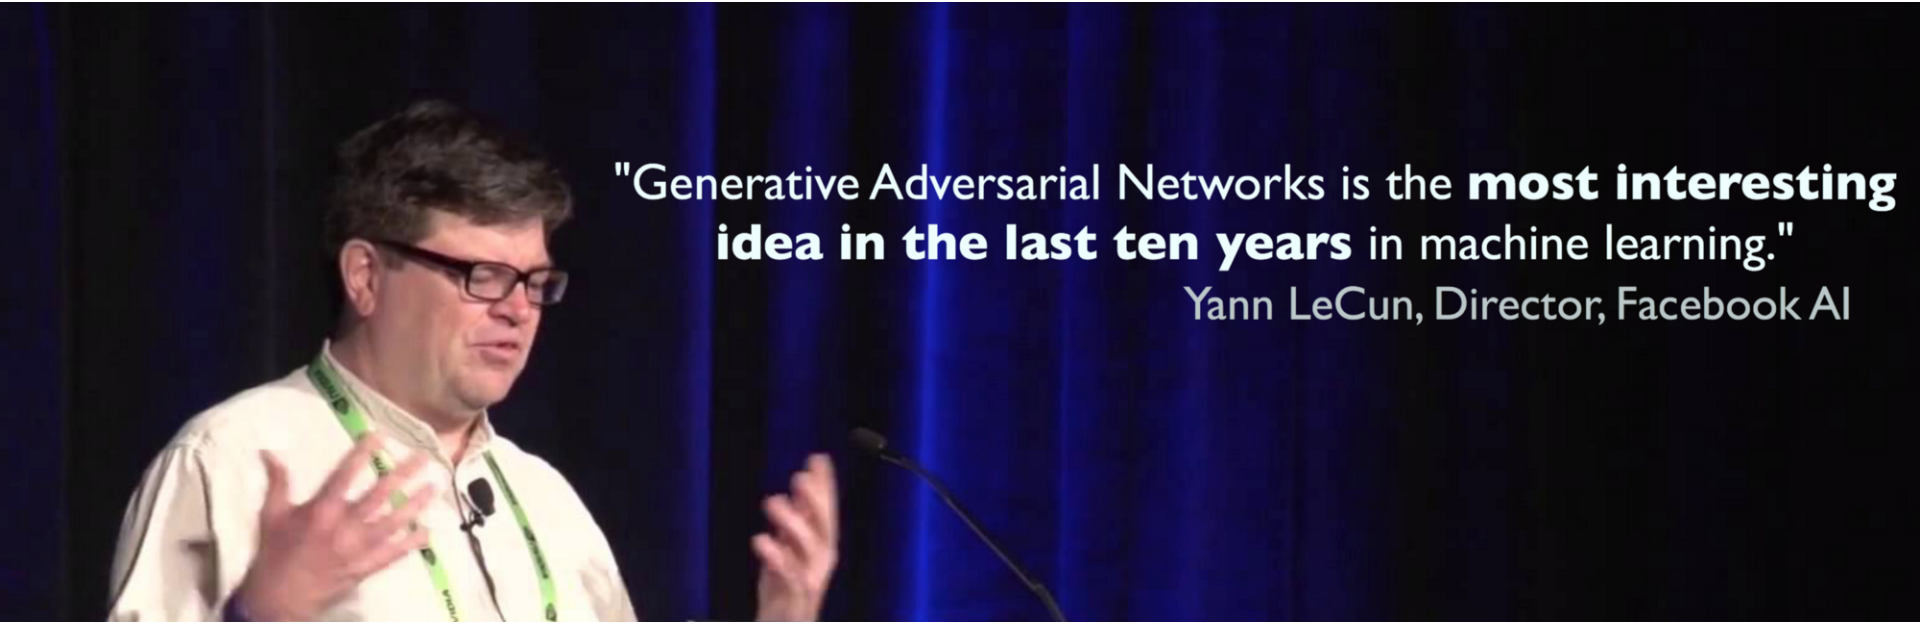
- DarkNet & YOLO
- Transfer Learning
- AWS

Week 5: GAN

- GANs

Week 5. Generative Adversarial Models - GANs

Why?



- Very cool applications

Create Anime characters

Towards the automatic Anime characters creation with Generative Adversarial Networks

Pose-guided Person Image Generation

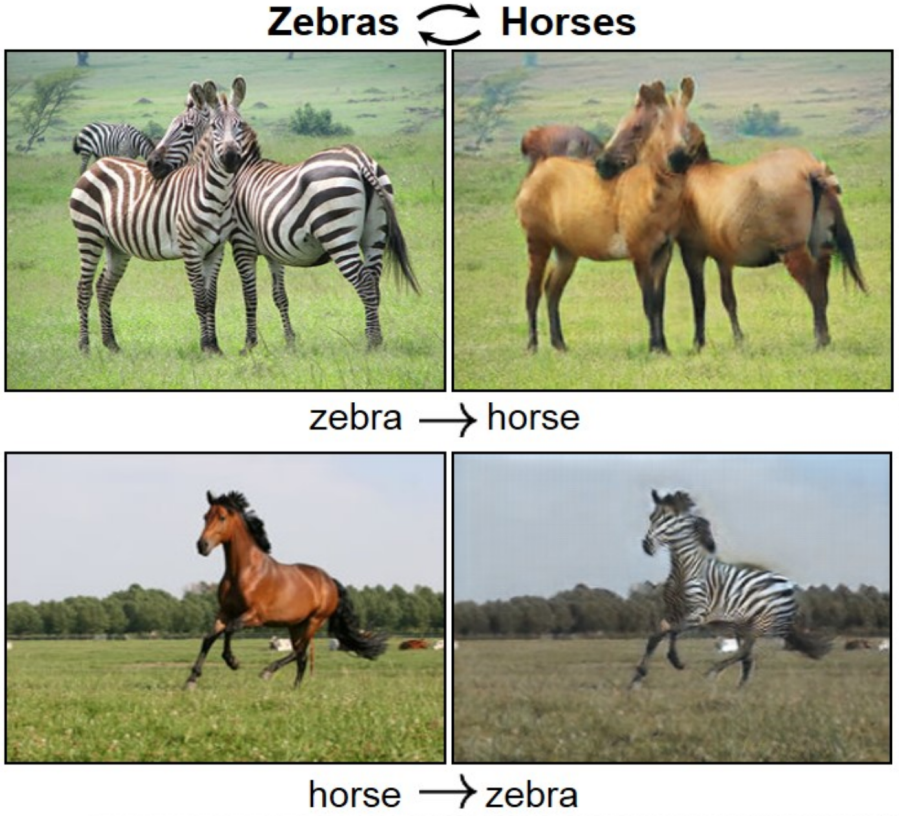
Ground truth

Generated

https://papers.nips.cc/paper/6644-pose-guided-person-image-generation.pdf

CycleGAN

CycleGAN



PixelDTGAN

Super resolution

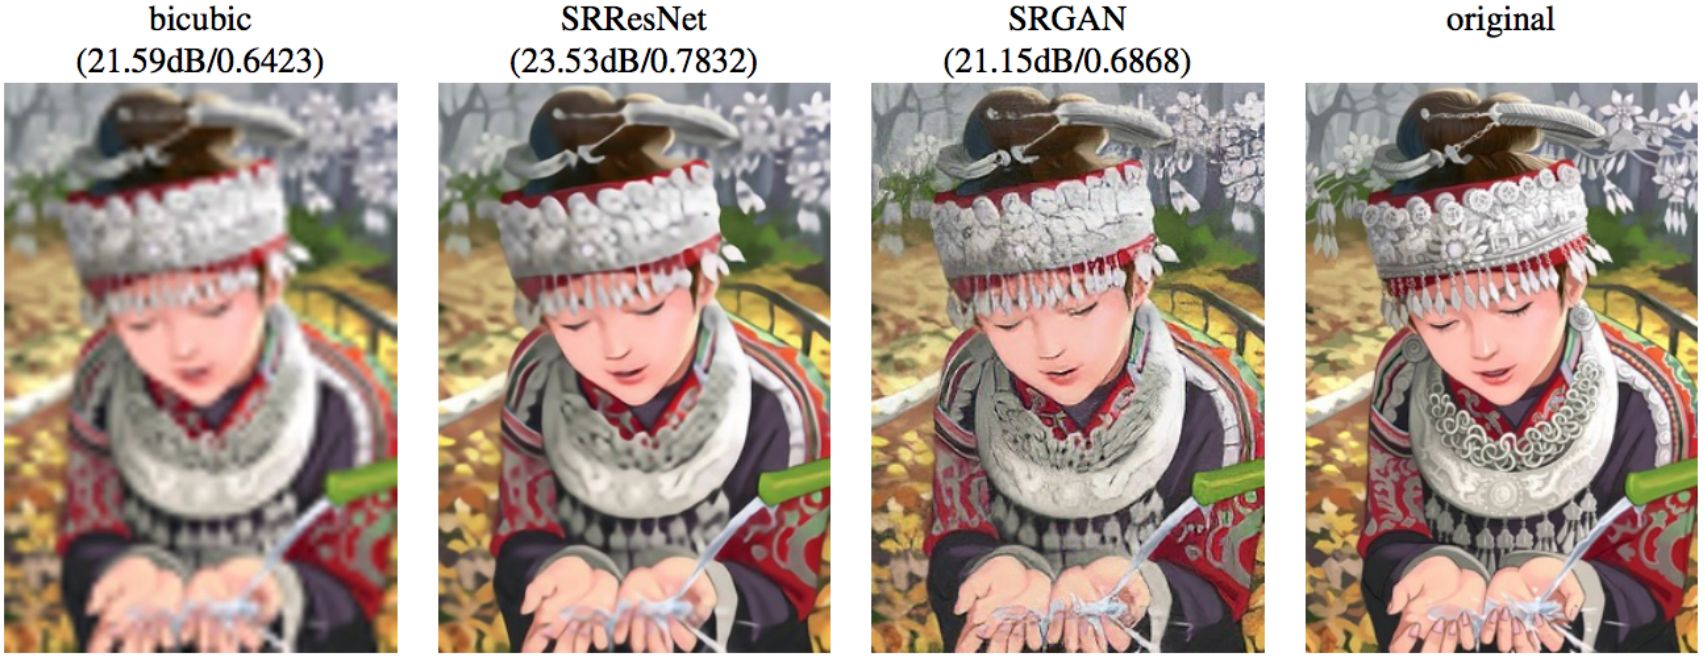


Figure 2: From left to right: bicubic interpolation, deep residual network optimized for MSE, deep residual generative adversarial network optimized for a loss more sensitive to human perception, original HR image. Corresponding PSNR and SSIM are shown in brackets. [4× upscaling]

Progressive GAN

Figure 5: 1024 × 1024 images generated using the CELEBA-HQ dataset. See Appendix F for a larger set of results, and the accompanying video for latent space interpolations.

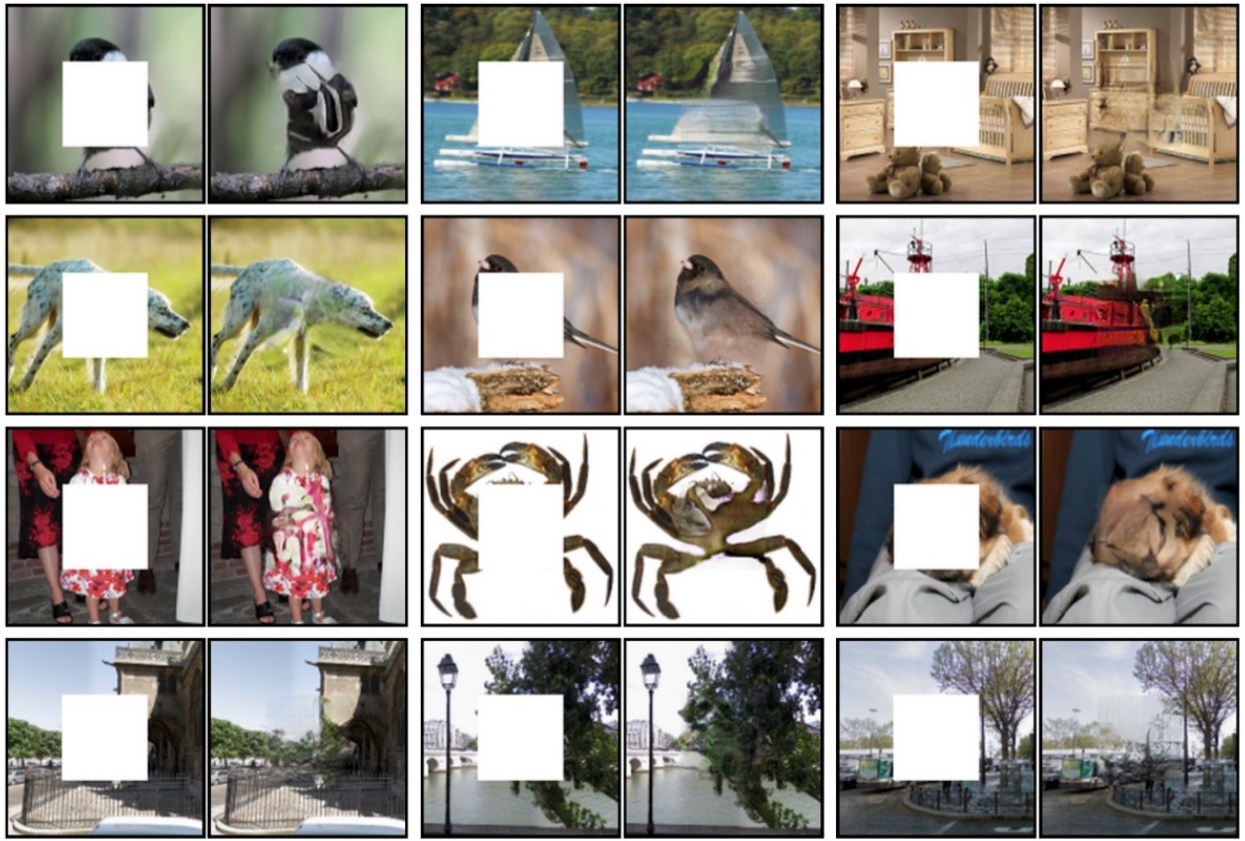
High-resolution image synthesis

Text to image (StackGAN)

Face synthesis

Synthesis results under various illuminations. The first row is the synthesized image, the second r

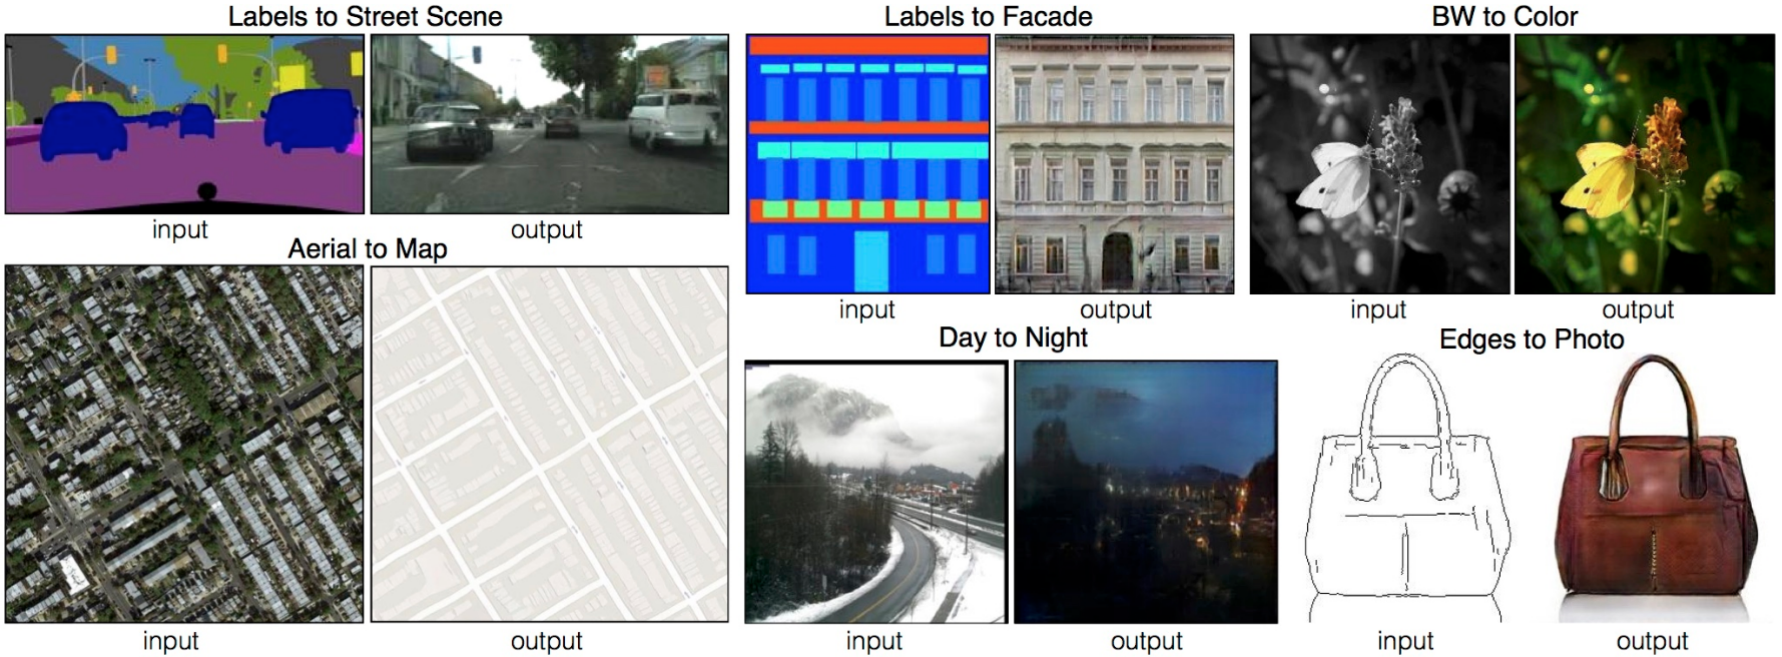
Image inpainting



Matching style - DiscoGAN

(b) Handbag images (input) & **Generated** shoe images (output)

Pix2Pix



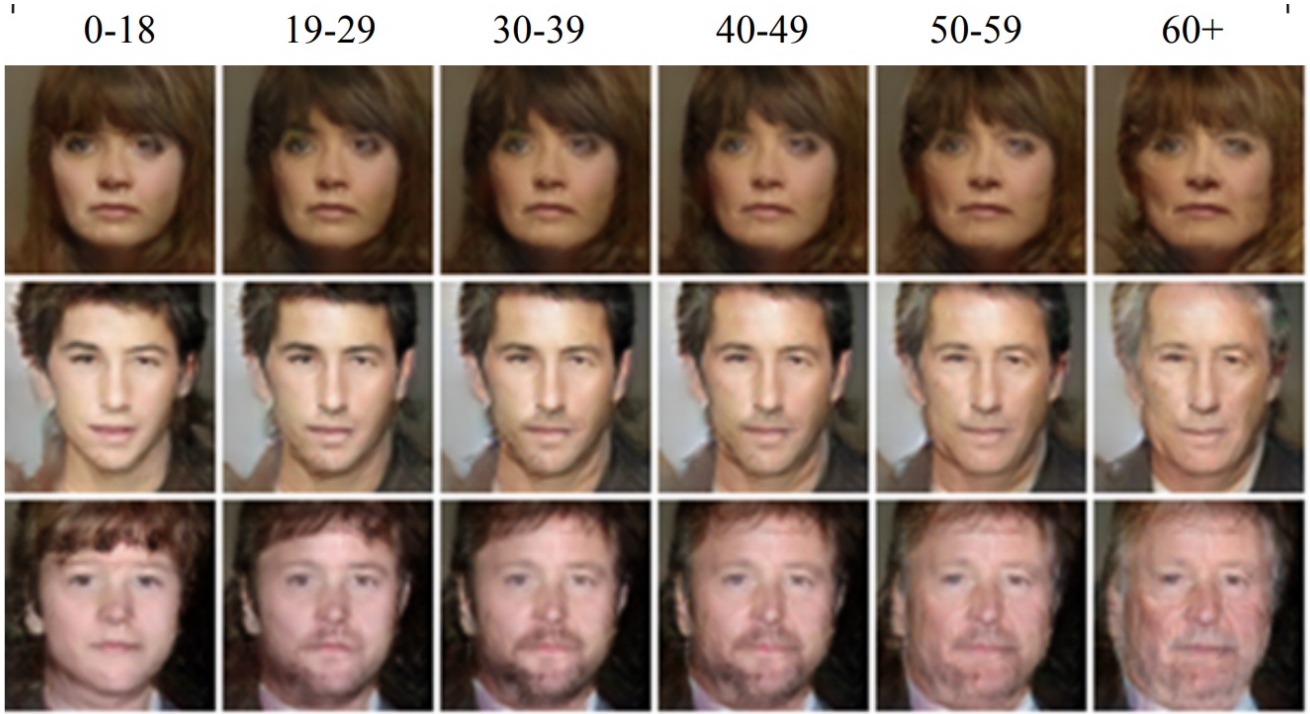
Labels to Street Scene
input
output
Labels to Facade
input
output
BW to Color
input
output
Aerial to Map
input
output
Day to Night
input
output
Edges to Photo
input
output

Emoji from pictures - DTN

Figure 4: Shown, side by side are sample images from the CelebA dataset, the emoji images created manually using a web interface (for validation only), and the result of the unsupervised DTN. See Tab. 4 for retrieval performance.

Image editing (IcGAN)

Face aging (Age-cGAN)



Music generation

(a) MidiNet model 1

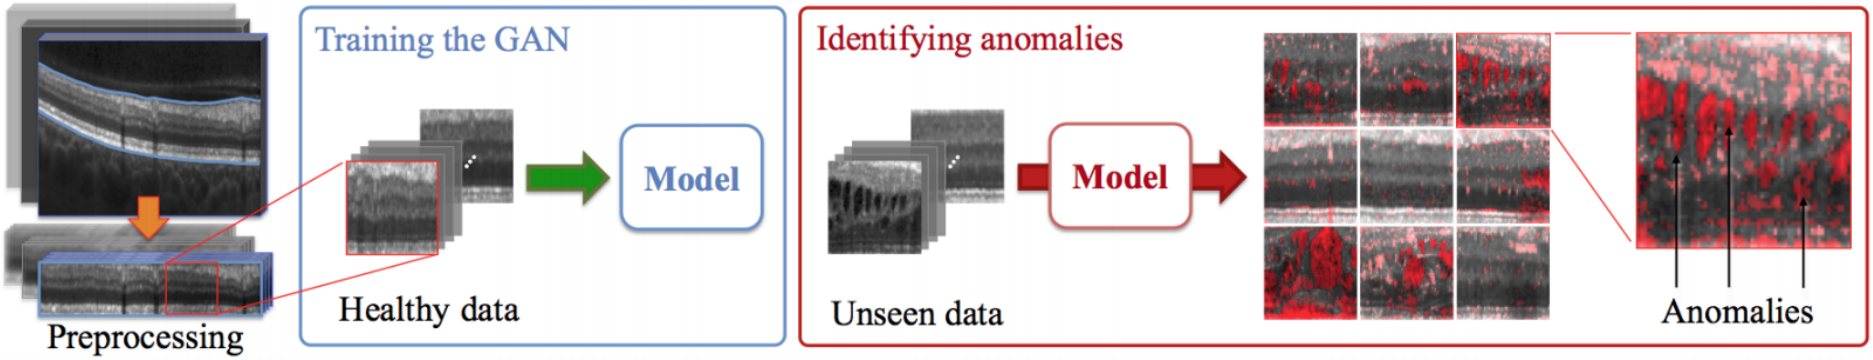
(b) MidiNet model 2

(c) MidiNet model 3

Figure 3. Example result of the melodies (of 8 bars) generated by different implementations of MidiNet.

https://salu133445.github.io/musegan/results

Medical (Anomaly Detection)

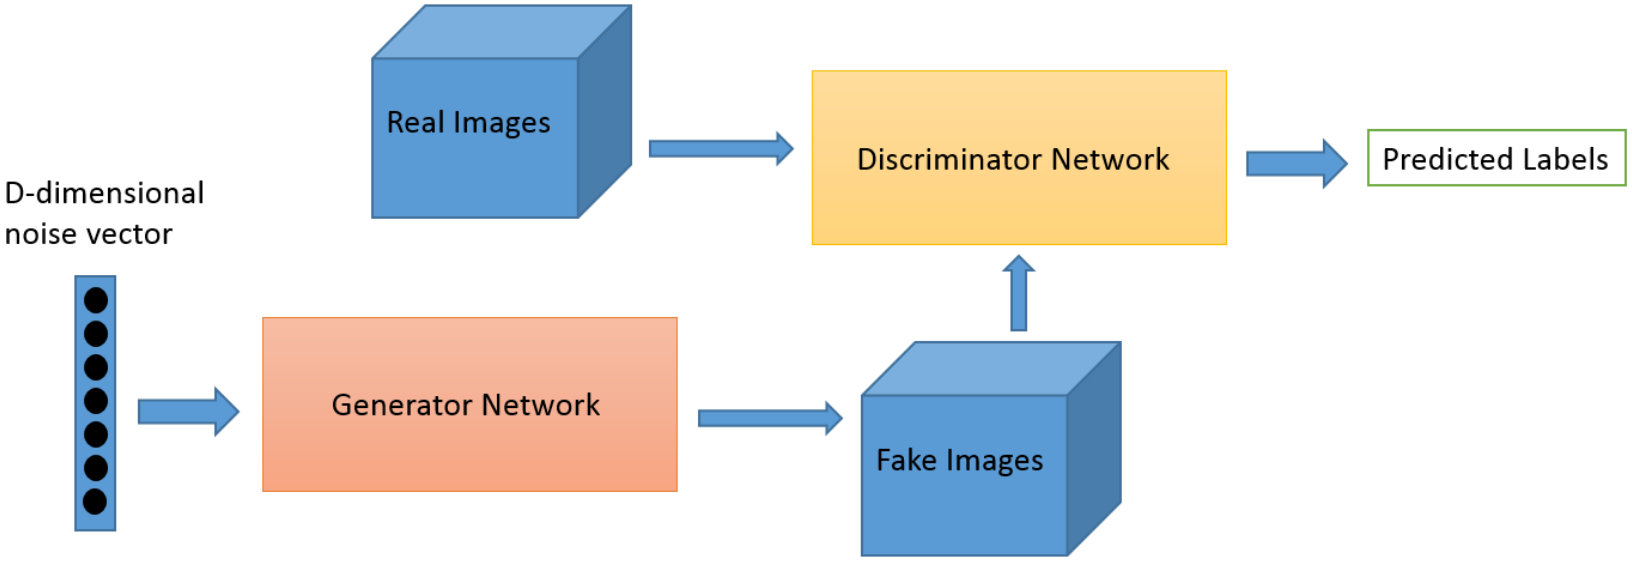


Generative Adversarial Models

Generative	vs.	Discriminative
• generate samples		• classify input data
class label y => sample x		sample x => class label y

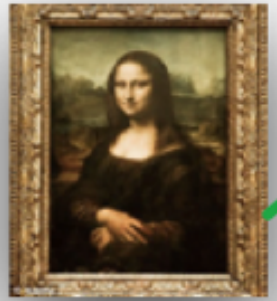
Examples

Generative Adversarial Models



Examples, akin to counterfeiter vs. cop

D: Detective



R: Real Data

G: Generator (Forger)

I: Input for Generator

Interactive playground

- https://affinelayer.com/pixsrv/

```
class GAN():
    def __init__(self):
        self.img_rows = 28
        self.img_cols = 28
        self.channels = 1
